CUE PATCH NOTES
Version 1.16.42 – March 28th, 2016

CUE 1.16.42 is the latest release for our RGB line of peripherals and contains a multitude of changes and enhancements.

Fixes / Improvements

- Resolved an issue with Discord and our Dolby drivers. Please restart your system after the update for this to be applied.
- Resolved an intermittent issue with system wake-up and CUE.
- Windows 10 Certificate has been updated for recent changes to compliance.
- Mouse cursor will now properly disappear when VLC is in full screen mode.
- Resolved other minor bugs and issues.

Important Note

During a firmware or software update for any Corsair peripheral, CUE may need additional components and time from a Window's Driver Software Installation to complete the process.

If you have to abort at any part of the process, simply reconnect the device and select Update Firmware from the Devices -> Settings Menu, and choose "Force Update from Server" to re-initiate the update.

Keyboard Connectivity

Connecting via USB 3.0:	Use one connector (the one with the keyboard icon) when connecting via USB 3.0
Connecting via USB 2.0:	Use both connectors when using USB 2.0.*

* Plug in the connector with the two arrows icon first, and the connector with the keyboard icon second.
